Know Your MMR Status

Measles is a highly contagious viral illness that spreads by person-to-person contact and through the air. Risk for widespread measles in the U.S. and in Japan remains low due to robust immunization and surveillance programs.

Measles-Mumps-Rubella (MMR) vaccination is the most important tool for preventing measles.

- Children should receive 2 MMR doses by age 6. Overseas, an additional, early MMR dose is recommended for infants as young as 6 months of age.
- Adults should have at least one documented dose of MMR vaccine in their lifetime, or evidence of immunity.

Scan the QR code to review your immunization record via the MHS GENESIS Patient Portal to ensure you are up-to-date with this important vaccine.
