ENVIRONMENTAL POLICY STATEMENT

U.S. Fleet Activities (FLEACT) Yokosuka is committed to protecting the environment, including pollution prevention, conform to all applicable environmental regulations and policies, and continually improve our environmental performance. We integrate environmental readiness requirements into all levels of operations and business practices through the Environmental Management System (EMS), to support mission readiness and minimize environmental risks. With these responsibilities in mind, we have adopted the following EMS guidelines for FLEACT Yokosuka departments, tenant units, and contractors:

- Comply with the Japan Environmental Governing Standards and all other applicable Department of War environmental policies;
- Establish and review environmental objectives and targets, implement a plan of action, and develop milestones designed to minimize adverse environmental impacts;
- Educate and train employees regarding their environmental responsibilities;
- Strive to continually improve our environmental performance through the use of effective environmental planning, implementation and assessment;
- Adhere to proper standard operating procedures to prevent spills and minimize environmental impacts;
- Reduce, reuse, and recycle materials and waste products to minimize generation of solid and hazardous waste;
- Implement a proactive drinking water quality management program;
- Prevent and control pollution resulting from storage, transport and distribution of Petroleum, Oil, and Lubricants.

The EMS requires active participation from all personnel onboard FLEACT Yokosuka including military, civilian, host nation employees, and contractors. It is the responsibility of all personnel to know your environmental requirements and routinely check for compliance to keep us inspection-ready and provide for a safer and more environmentally conscious workplace.
